

Supplemental table 1: Outcome of pregnancies in kidney transplant recipients

| Age | Transplant vintage (years) | eGFR at conception (ml/min) | Proteinuria at conception (mg/day) | Birth weight (gm) | Pregnancy outcome | Any Rejection during pregnancy | Graft outcome at last follow up |
|-----|----------------------------|-----------------------------|------------------------------------|--|---|--------------------------------|--|
| 20 | 5 | 80 | 107 | 1860 | Preterm LSCS Severe Pre-eclampsia | No | eGFR 61ml/min/1.73m ² at 1.5 years |
| 27 | 4 | 121 | 121 | 2200 | Preterm | No | Dialysis dependent at 5 years |
| 19 | 11 | 72 | 160 | 3000 | Term | No | Stable at 1 year |
| 18 | 13 | 44 | 430 | IUD | IUD at 31weeks | Yes | eGFR 19ml/min at 6 months |
| 30 | 15 | 66 | 61 | 1 st twin - END 2 nd - 1700 | Preterm LSCS | No | Stable at 11 years |
| 12 | 17 | 25 | 1266 | 1220 | Preterm LSCS Severe Pre-eclampsia | No | eGFR 14.2 ml/min/1.73m ² at 1 year |

Abbreviations: eGFR – Estimated Glomerular filtration rate, IUD – Intrauterine death, LSCS – lower segment caesarean section.
